

Can someone send email pretending to be your business?

For most small businesses, yes. Criminals send fake invoices and payment-change requests that look exactly like they came from you. Your customers pay the wrong account, and your name takes the hit. The settings that stop this are simple, but most businesses have never had them set up. Since 2024, Google and Yahoo also expect them, so missing them can push your real emails into spam.

What we check

A grade from A to F in under a minute, using only public information. Nothing installed, no passwords needed.

Email impersonation

Whether criminals can send email using your name (SPF, DMARC, DKIM).

Website

Whether your security certificate is valid and protected from being faked.

Domain ownership

Whether your domain could expire, be hijacked or be transferred away.

Packages

Domain Lockdown

\$199 one-time

For domains that don't send email. We block anyone from sending email as your domain, then rescan to confirm.

Fix-It Package

from \$599 one-time

We set up SPF, DMARC, DKIM, DNSSEC and certificate locks with your providers, rescan to confirm an A or B, and include 30 days of monitoring.

Ongoing Protection

\$79 per month

Daily checks, instant alerts if anything breaks or your domain nears expiry, a monthly report, and priority fixes. Cancel anytime.

The check and a 15-minute walkthrough are free. Prices in Canadian dollars, plus 13% HST.

How it works

1. **Check:** we scan your domain and share a graded report.
2. **Review:** we walk you through the results in 15 minutes, by phone or video.
3. **Fix:** if you choose, we fix every issue and rescan to prove it. Most businesses are fully protected within a week.
4. **Stay protected:** optional monitoring catches new problems early.
